How to Build a Website Using Ready-Made Templates

Building Your Website · https://thewebops.com/ar/help-center/building-your-website/how-to-build-a-website-using-ready-made-templates/

Ready-Made Templates allow you to quickly launch a website using professionally designed layouts that you can customize to fit your needs.
This option is ideal if you want more design control while still starting with a pre-built website structure.

Before starting this process, make sure you have already completed the initial builder setup steps described in:
How to Build a Website with WebOps Builder

Step 1: Open the Manual Building Options

After completing onboarding, choosing **Build it Yourself**, and clicking **Start Building**, you will see different website building options.

Select Ready-Made Templates to start building your website using professionally designed templates.

Step 2: Select Ready-Made Templates

From the available manual website building methods, choose **Ready-Made Templates**.

This will open a gallery of available templates that you can use to build your website.

Step 3: Choose a Template

Browse through the available designs and select the template that best matches your website style and purpose.

Once you find a template you like:
Click Install

The system will automatically install the template and prepare your website.
This process usually takes a few moments.

Step 4: Customize Your Website

Once the template is installed, you can start customizing your website.
From your **WordPress Dashboard**, you can:

- edit pages
- change images and text
- adjust colors and fonts
- modify menus
- add new pages
- install plugins

Most templates can be edited using **Elementor**, allowing you to visually design your pages without writing code.

What Happens Next?

After installing your template, your website will be ready for customization.
You can access your **WordPress Dashboard** to manage your website content and design, including:

- Pages
- Posts
- Media
- Menus
- Theme settings

Your site is now ready to be edited and published.

Helpful Tip

Choose a template that is closest to the layout you want for your website. This will save time when customizing your pages later.
