How to Customize the Colors of Your Website

Website Design & Branding · https://thewebops.com/help-center/website-design-branding/how-to-customize-the-colors-of-your-website-2/

Where to Customize Website Colors

To change your website colors:

1. Log in to your **WordPress Dashboard**
2. Go to **Appearance → Customize**
3. The Customizer will open with a live preview of your website
4. Navigate to **Global → Colors**

Customize Your Website Colors

Inside the **Colors** section, you can update different color elements of your website, depending on your theme.

Common options include:

- Primary and secondary colors
- Background color
- Text and heading colors
- Link and button colors

Changes are shown instantly in the live preview.

Preview Your Changes

Use the live preview to review how your new colors look across your website before publishing. You can also switch between desktop, tablet, and mobile views to ensure consistency.

Save Your Changes

When you're satisfied with the colors:

1. Click **Publish** to apply the changes to your live website

Important Notes

- Available color options depend on your active theme
- Some themes may limit which colors can be customized
- Advanced color control may require a different theme
